DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 03/08/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 10/761,947 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 8-11, 13-18, 21-24, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Kumai et al (US 4,073,643).

As to claim 1, 4, 5, 9, 11, 13, 14, 17, 18, 22, 24, and 26, Kumai et al disclose a method of producing thin cast strip with low surface roughness and low porosity by continuous casting comprising the steps of:

- a. assembling a pair of cooled casting rolls having a nip between them and with confining closure adjacent the ends of nip;
- b. introducing molten steel having a total oxygen content of at least 100 ppm

and a free oxygen content between 30 and 50 ppm between the pair of casting rolls to form a casting pool between the casting rolls at a temperature such that a majority of the oxide inclusions formed therein are in liquidus state;

c. counter-rotating the casting rolls and transferring heat from the molten steel to form metal shells on the surfaces of the casting rolls such that the shells grow to include oxide inclusions relating to the total oxygen content of the molten steel and form steel strip free of crocodile surface roughness; and

d. forming solidified thin steel strip through the nip between the casting rolls from said solidified shells (col. 2, lines 14-30 and table 4).

As to claim 2 and 15, the carbon content in the range of 0.001 to 0.1%, Manganese in the range of 0.1 to 10%, and Si in the range of 0.01 to 10% (col. 2, lines 24-27).

As to claim 3, 8, 10, 16, 21, and 23, the aluminum and sulphur content is less than 0.01 % (col. 2, line 26 and table 1).

Allowable Subject Matter

4. Claims 6, 7, 12, 19, 20, and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1725

The prior arts of record fail to teach having oxide inclusions comprised of MnO, SiO₂, and Al₂O₃ distributed between 2 and 4 grams per cubic centimeter and oxide inclusions range in size between 2 and 12 microns.

Response to Arguments

2. Applicant's arguments filed 3/14/05 have been fully considered but they are not persuasive.

Applicant argues that Kumai et al fail to teach having total oxygen content of at least 100 ppm and a free oxygen between 30 and 50 ppm. Examiner respectfully disagrees, since table 4, col.11 and col. 12, disclose the claimed invention.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
